Abhijit Prakash Gawankar

Senior Software Engineer

Frontend Architecture · React · Redux · JavaScript · Real-time & Geospatial Apps · CI/CD & Docker · AI-Driven Development

Pune, Maharashtra, India | agawankar1989@gmail.com | +91 92263 25994 | linkedin.com/in/abhijit-prakash-gawankar/

PROFILE SUMMARY

Senior Software Engineer with 10 years of web development experience, including 7 years building production applications in React.js. Specializes in real-time, data-heavy web interfaces — most recently built mission-critical robot-control, live-telemetry and Mapbox-based geospatial applications for autonomous security systems, rendering 80K+ track-history points without browser freezes. Strong in frontend architecture, Redux state management, performance optimization (Web Workers, viewport and zoom-based data reduction) and reusable component design, with hands-on Node.js, REST API, Docker and Azure DevOps CI/CD experience. Converts Figma and Adobe XD designs into production-ready UIs and uses AI-driven development tools (GitHub Copilot, ChatGPT, Claude) to ship faster. Owns features end-to-end and works closely with product, backend and QA teams for US and Indian enterprise clients, including PayPal (via IBM).

CORE TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS, Material UI, React Bootstrap, Next.js
State & Architecture: Redux, Redux Toolkit, Context API, reusable components, modular architecture, API-driven UI
Backend & Integration: Node.js, Express.js, REST APIs, authentication, authorization, asynchronous workflows
Maps & Performance: Mapbox GL, GeoJSON, real-time telemetry, large-data rendering, viewport filtering, zoom-based sampling, distance reduction, Web Workers, performance profiling
Tools & Delivery: Git, npm, Jira, Agile/Scrum, code reviews, production support
DevOps & Cloud: CI/CD pipelines (Azure DevOps), Docker, containerized builds and deployments, Azure
AI-Driven Development: AI coding assistants (GitHub Copilot, ChatGPT, Claude) for code generation, refactoring, debugging, test writing and code review
Design-to-Code: Figma, Adobe XD, Adobe Photoshop — converting UI/UX designs into responsive, pixel-accurate web applications
Domains: E-commerce, Healthcare (Medical Records), Enterprise HR Platforms, Security & Autonomous Systems

PROFESSIONAL EXPERIENCE

ARES Safety Solutions Pvt Ltd (ARES Security Corporation)

Senior Software Engineer (Remote) | *Sep 2022 – Oct 2026*

Project: Enterprise security and safety platform supporting operational workflows, digital-twin capabilities and map-based visualization.

Environment: React.js, JavaScript, Redux, Material UI, SCSS, Node.js, REST APIs, Mapbox GL, Docker, Azure DevOps (CI/CD), Figma

- Engineered real-time web interfaces for robot control and mission management using React.js, Material UI, Redux and Mapbox GL, enabling operators to monitor and control autonomous systems through real-time telemetry.
- Engineered Mapbox-based geospatial visualization handling 80K+ track-history points; designed a 4-stage processing pipeline — viewport filtering, zoom-aware sampling, movement filtering and distance-based reduction — to cut unnecessary rendering workload and keep large-scale maps responsive.
- Diagnosed a “Page Unresponsive” crash caused by synchronous heavy computation on the main thread and resolved it by offloading track-history distance calculations to a Web Worker, eliminating browser freezes during large-dataset rendering.
- Solved a data-accuracy issue in multi-segment track-history rendering — where off-screen point filtering created false line connections across real gaps — by introducing a boundary-aware flag into the rendering pipeline, improving visualization reliability for operators.
- Fixed critical reliability bugs in the robot camera-control interface, including video-widget resets and resize/fill issues on camera switch, by resolving component state race conditions and improving resize handling — ensuring stable live camera feeds for mission operators.
- Architected Redux-driven state management for object-detection workflows and mission-critical UI, enabling low-latency updates and improved operational usability.
- Built reusable React components, utilities and common UI patterns used across multiple business modules, improving consistency and maintainability.
- Translated Figma designs into responsive, pixel-accurate React interfaces, working with UI/UX designers through design handoff to keep components consistent with the design system.
- Worked with CI/CD pipelines on Azure DevOps and Docker-based builds to deliver frontend releases reliably across development, staging and production environments.

- Applied AI-driven development practices — using GitHub Copilot, ChatGPT and Claude for component scaffolding, refactoring, debugging and test generation — to speed up delivery while maintaining code quality through review and testing.
- Owned frontend features end-to-end — from requirement analysis and technical solution design through development, testing, demonstrations and production support — across API-driven workflows spanning authentication, transactions, approvals and role-based operations.

IBM India Pvt Ltd

Experience Application Developer (Remote) | *Sep 2021 – Sep 2022*

Client: PayPal India

Project: BRIDGE – enterprise employee platform for HR procedures, company news, announcements, events, training, nominations, profiles and team connectivity.

Environment: React.js, JavaScript, HTML5, CSS, SCSS, Node.js, React Bootstrap

- Built and enhanced React-based modules for BRIDGE, PayPal India's enterprise employee platform spanning HR workflows, announcements, training and team connectivity.
- Built reusable UI components and shared design patterns, improving consistency, maintainability and delivery speed across modules.
- Translated business requirements into React workflows and integrated frontend functionality with backend APIs.
- Owned assigned modules end-to-end, from requirement clarification through development, testing, stakeholder demonstrations and delivery.

Eliptico IT Solutions Pvt Ltd

Senior Software Engineer (Remote) | *Apr 2020 – Sep 2021*

Client: eHealth Technologies

Project: US healthcare information platform providing access to medical records collected from more than 85K medical facilities.

Environment: Angular, React.js, Azure, Mock API, HTML5, CSS, JavaScript

- Developed modular healthcare web functionality supporting large-scale medical-records workflows across a platform connected to 85K+ medical facilities.
- Designed and implemented reusable Angular and React components with a focus on maintainability and consistent UI behavior.
- Worked directly with US-based stakeholders, laboratories and hospitals to clarify requirements and translate business needs into application features.
- Created and verified reusable components using Storybook to improve UI consistency and development quality.

OpenWiFi Labs Pvt Ltd

Software Developer (On-site – Hyderabad) | *Oct 2019 – Feb 2020*

Project: Simply5 – web platform for managing internet access for users in public locations such as cafés, colleges and hospitals.

Environment: React.js, Next.js, Node.js, HTML5, CSS, JavaScript | npm, Git, Trello

- Developed web application modules for Simply5 using React.js and Next.js, integrating frontend features with backend services.
- Built reusable UI components and implemented responsive, product-driven interfaces.
- Delivered features and resolved defects within sprint timelines alongside the core development team.

Adaequare Info Pvt Ltd

Software Engineer (On-site – Hyderabad) | *Jul 2016 – Sep 2019*

Project: Listany – e-commerce platform enabling businesses to create and manage online stores.

Environment: JsRender/JsViews (jQuery-based templating), Bootstrap, jQuery, JavaScript, Gulp, Node.js, CSS3 | npm, Git, Bugzilla, ActiveCollab, Trello

- Built custom e-commerce storefronts on the Listany platform for 8 B2B clients and 4 additional B2C/owned projects — 12 implementations in total.
- Designed reusable product-listing, product-detail and facet-filter components used across multiple commerce implementations.
- Converted Adobe Photoshop and Adobe XD designs into responsive, cross-browser storefront UIs.
- Worked directly with clients to clarify requirements and business rules, translating them into tailored solutions.

Clients: Silverwala, FashionCentro, SuperGummy, HyderabadRunners, BabyVille, RoundRepublic, CustomChocos, Srinath Jewellers

EDUCATION & EARLY CAREER

Bachelor of Computer Application (BCA) — Tilak Maharashtra University, Pune | 2010 – 2012

Early career: Programmer Analyst – Application Support, Global Software / Udyog Software (I) Ltd, Mumbai | 2012 – 2016
